# Skills

## Frontend Developer

As a Frontend Developer I expect to learn the key technologies required to design and develop websites and applications.

The core technologies are HTML, CSS and JavaScript used to develop interactive and responsive websites including the use of CSS frameworks such as Bootstrap.

Web application skills will include the use of third-party and Server APIs and using JavaScript outside of the browser in the Node runtime environment.

Finally I expect to learn the the React framework for building modern web applications

# About

## About me

Graduate MBA with significant experience of banking, finance and corporate development gained with blue-chip multinational companies. Now looking to retrain and switch to a career in web development.

Experienced in basic website development using Content Management Systems (WordPress) and page builder tools and plugins. Committed and passionate about acquiring new web development skills to be able to build web applications using modern methods and APIs.

Please contact me to discuss your next web project.
